

MEASUREMENTS:

1. Is the hearth raised or flat?
- Fender to sit on or around it?
2. Is your fender to surround or butt up to your fire surround?
3. **Your hearth measurements:**
 - A. Width
 - B. Depth to wall or to fire surround (state which)
 - C. Outside width of fire surround (at seat height).....
 - D. Skirting board thickness (if applicable)
 - E. Depth of fire surround (if applicable - at seat height).....
 - F. Size of fire opening
 - G. Hearth thickness

Any other measurements: i.e. power points, gas taps etc.

Total height of Fender:

Normal height is 510mm (20 inches) but this can be varied.

If you find the measuring too daunting, we are happy to make an appointment to come and see you with samples.
